

## Dental Crowns Scarborough | Restore Strength and Beauty to Your Smile with SR SmileCare

A healthy and confident smile plays an important role in both appearance and overall oral health. When teeth become damaged, weakened, or severely decayed, dental crowns provide an effective and long-lasting solution to restore their strength and function. SR SmileCare offers professional [dental crowns Scarborough](#), helping patients protect damaged teeth while improving the beauty of their smiles.

Dental crowns are custom-made caps that are placed over damaged or weakened teeth to restore their shape, size, and strength. They are designed to look natural and blend seamlessly with surrounding teeth. At SR SmileCare, our experienced dental team uses modern technology and high-quality materials to create durable crowns that provide both protection and aesthetic improvement.

### 1. What Are Dental Crowns?

A dental crown is a tooth-shaped covering that completely encases a damaged tooth. Crowns are commonly recommended when a tooth is too

weak for a filling but does not require extraction. By covering the tooth, the crown strengthens it and restores its ability to function normally.

Dental crowns are often used to treat several dental conditions, including:

- Severely decayed or weakened teeth
  - Cracked or broken teeth
  - Teeth that have undergone root canal treatment
  - Large fillings that weaken the tooth structure
  - Cosmetic improvements for misshaped or discolored teeth
- Dental implants that require a protective crown

At SR SmileCare, crowns are carefully crafted to match the color, size, and shape of your natural teeth, ensuring a comfortable and natural-looking result.

## 2. Benefits of Dental Crowns

Dental crowns offer several advantages for patients who want to restore both the function and appearance of their teeth.

- **Restores Tooth Strength:** Crowns reinforce damaged or weakened teeth, allowing them to function normally while preventing further damage.
- **Improves Appearance:** Crowns can dramatically improve the look of chipped, discolored, or misshaped teeth, giving patients a more confident smile.
- **Long-Lasting Solution:** With proper care and regular dental checkups, dental crowns can last for many years.
- **Protects Teeth After Treatment:** Teeth that have undergone root canal treatment often require crowns to protect them from fractures and damage.

## 3. The Dental Crown Procedure

The process of getting dental crowns in Scarborough at SR SmileCare typically involves two appointments. During the first visit, the dentist examines the tooth and prepares it by removing any damaged areas. An impression of the tooth is then taken to create a custom crown that fits perfectly.

While the permanent crown is being prepared in the dental laboratory, a temporary crown may be placed to protect the tooth. At the second appointment, the custom crown is carefully fitted and bonded to the tooth, restoring its strength and appearance.

The procedure is comfortable and performed with precision to ensure a natural feel and proper bite alignment.
